

Welcome to our **Bose Professional Systems Division** product demonstration room. As an authorized and certified dealer for Bose professional sound system products, we felt it was necessary to provide a listening environment to our customers who are contemplating a quality upgrade to their current systems.

We have spent many weeks designing an automated suite using Bose proprietary Control Space hardware and software that allows us to demonstrate various combinations of loudspeaker products, either in full range mode or with bass augmentation.

Furthermore, this demonstration room is interactive, in the sense that we can adjust product properties on the fly through software to accommodate our customer's needs. We encourage you to contact us to arrange for a demonstration of the many new and proven Bose loudspeaker technologies.
